Product Specification

### 1. General Description

The LP156WF1 is a Color Active Matrix Liquid Crystal Display with an integral Light Emitting Diode (LED) backlight system. The matrix employs a-Si Thin Film Transistor as the active element. It is a transmissive type display operating in the normally white mode. This TFT-LCD has 15.6 inches diagonally measured active display area with HD resolution(1080 vertical by 1920 horizontal pixel array). Each pixel is divided into Red, Green and Blue sub-pixels or dots which are arranged in vertical stripes. Gray scale or the brightness of the sub-pixel color is determined with a 6-bit gray scale signal for each dot, thus, presenting a palette of more than 262,144 colors.

The LP156WF1 has been designed to apply the interface method that enables low power, high speed, low EMI.

The LP156WF1 is intended to support applications where thin thickness, low power are critical factors and graphic displays are important. In combination with the vertical arrangement of the sub-pixels, the LP156WF1 characteristics provide an excellent flat display for office automation products such as Notebook PC.

### General Features

Active Screen Size	15.6 inches diagonal
Outline Dimension	359.3(H, typ.) × 209.5(V, typ.) × 5.7(D,max) [mm]
Pixel Pitch	0.17925 mm x 0.17925 mm
Pixel Format	1920 horiz. By 1080 vert. Pixels RGB strip arrangement
Color Depth	6-bit, 262,144 colors
Luminance, White	300 cd/m <sup>2</sup> (Typ.5 point)
Power Consumption	Total 6.35 Watt(Typ.) @ LCM circuit 1.74 Watt(Typ.), B/L (W/O LED Driver) 4.61 Watt(Typ.)
Weight	470g (Max.)
Display Operating Mode	Transmissive mode, normally white
Surface Treatment	<b>Anti-Glare treatment of the front polarizer(3H)</b>
RoHS Comply	Yes

Product Specification

**2. Absolute Maximum Ratings**

The following are maximum values which, if exceeded, may cause faulty operation or damage to the unit.

**Table 1. ABSOLUTE MAXIMUM RATINGS**

Parameter	Symbol	Values		Units	Notes
		Min	Max		
Power Input Voltage	VCC	-0.3	4.0	Vdc	at 25 ± 5°C
Operating Temperature	TOP	0	50	°C	1
Storage Temperature	HST	-20	60	°C	1
Operating Ambient Humidity	HOP	10	90	%RH	1
Storage Humidity	HST	10	90	%RH	1

Note : 1. Temperature and relative humidity range are shown in the figure below.  
Wet bulb temperature should be 39°C Max, and no condensation of water.

### 3. Electrical Specifications

#### 3-1. Electrical Characteristics

The LP156WF1 requires two power inputs. The first logic is employed to power the LCD electronics and to drive the TFT array and liquid crystal. The second backlight is the input about LED BL.with LED Driver.

**Table 2. ELECTRICAL CHARACTERISTICS**

Parameter	Symbol	Values			Unit	Notes
		Min	Typ	Max		
LOGIC :						
Power Supply Input Voltage	VCC	3.0	3.3	3.6	V <sub>DC</sub>	1
Power Supply Input Current	I <sub>CC</sub>	-	530	610	mA	1
Power Consumption	P <sub>c</sub>	-	1.74	2.0	Watt	
Power Supply Inrush Current	I <sub>CC_P</sub>	-	-	1500	mA	
Differential Impedance	Z <sub>m</sub>	90	100	110	Ohm	2
BACKLIGHT : ( W/O LED Driver)						
LED Power Input Voltage	V <sub>LED</sub>	7.0	-	20	V	
LED Power Input Current	I <sub>LED</sub>	-	-	-	mA	3
LED Power Consumption	P <sub>LED</sub>	-	4.61	4.88	W	3
LED Power Inrush Current	I <sub>LED_P</sub>	-	-	2000	mA	
PWM Dimming (Duty) Ratio	-	12.5	-	100	%	4
PWM Impedance	Z <sub>PWM</sub>	20	40	60	kΩ	
PWM Frequency	F <sub>PWM</sub>	200	-	1000	Hz	5
PWM High Level Voltage	V <sub>PWM_H</sub>	3.0	3.3	5.3	V	
PWM Low Level Voltage	V <sub>PWM_L</sub>	0	-	0.5	V	
LED_EN High Voltage	V <sub>LED_EN_H</sub>	3.0	3.3	5.3	V	
LED_EN Low Voltage	V <sub>LED_EN_L</sub>	0	-	0.5	V	
Life Time		15,000	-	-	Hrs	6

Note)

- The specified I<sub>cc</sub> current and power consumption are under the V<sub>cc</sub> = 3.3V , 25°C , f<sub>v</sub> = 60Hz condition whereas Mosaic pattern is displayed and f<sub>v</sub> is the frame frequency.

- This impedance value is needed to proper display and measured form LVDS Tx to the mating connector.
- The specified LED current and power consumption are under the V<sub>led</sub> = 12.0V , 25°C , Dimming of Max luminance whereas White pattern is displayed and f<sub>v</sub> is the frame frequency.
- The operation of LED Driver below minimum dimming ratio may cause flickering or reliability issue.
- This Spec. is not effective at 100% dimming ratio as an exception because it has DC level equivalent to 0Hz. In spite of acceptable range as defined, the PWM Frequency should be fixed and stable for more consistent brightness control at any specific level desired.
- The life time is determined as the sum of the continuous operation time at which brightness of LCD at the typical LED current is 50% compare to that of minimum value specified in table 9 under general user condition.

### 3-2. Interface Connections

This LCD employs one interface connections, a 40 pin connector is used for the module electronics interface and LED Driver.

The electronics interface connector is a model 20455-040E-0x manufactured by I-PEX.

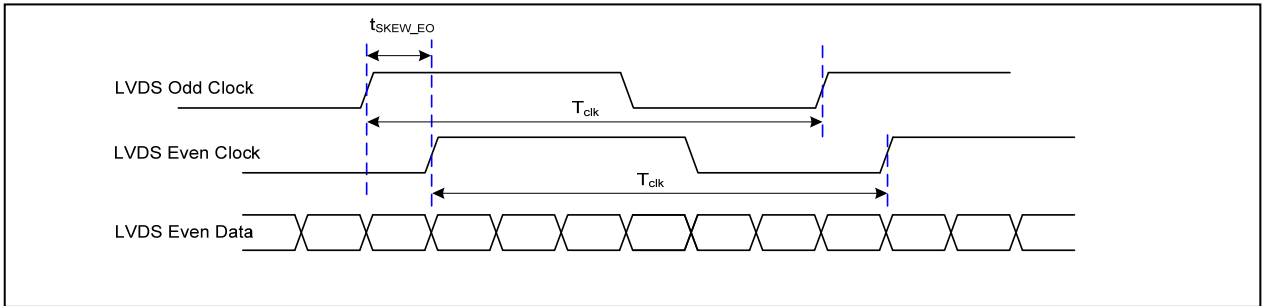

**Table 3. MODULE CONNECTOR PIN CONFIGURATION (CN1)**

Pin	Symbol	Description	Notes
1	NC	Reserved ( connector test )	<p>1, Interface chips 1.1 LCD : SW, ST2_BS (LCD Controller) including LVDS Receiver 1.2 System : THC63LVDF823A or equivalent * Pin to Pin compatible with LVDS</p> <p>2. < LVDS Data Format >

### 3-4. Signal Timing Specifications

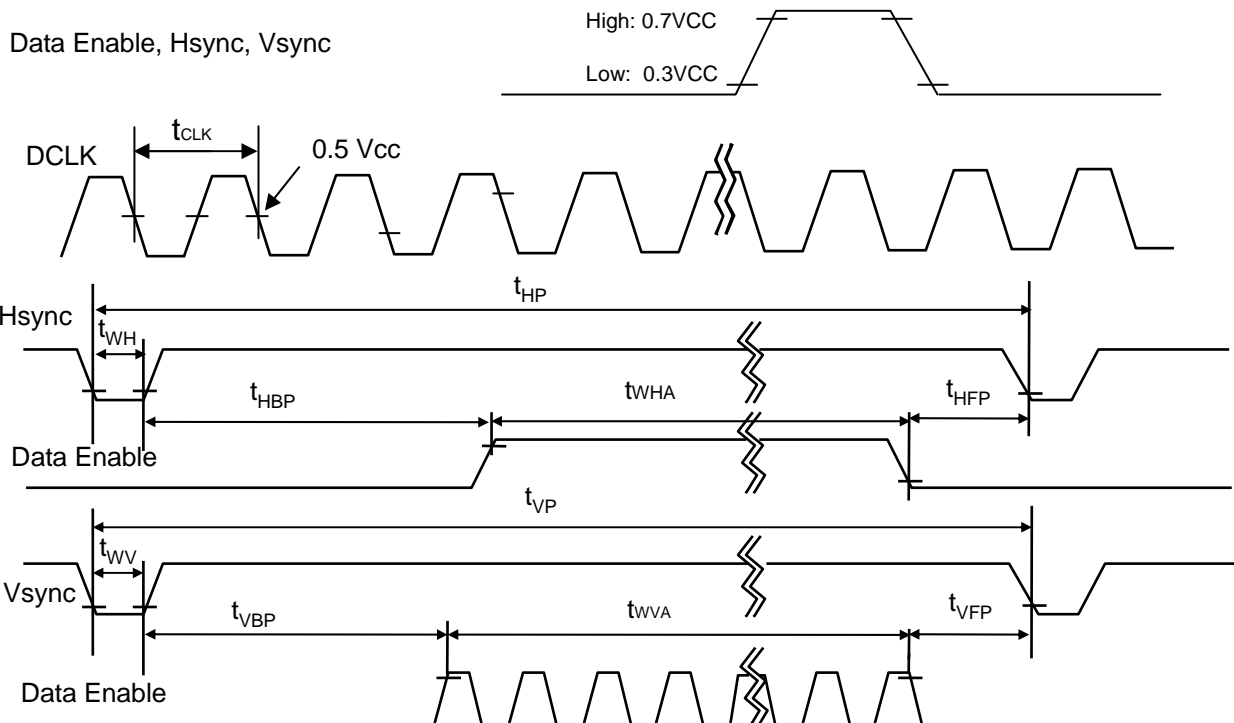

This is the signal timing required at the input of the User connector. All of the interface signal timing should be satisfied with the following specifications and specifications of LVDS Tx/Rx for its proper operation.

**Table 6. TIMING TABLE**

ITEM	Symbol	Min	Typ	Max	Unit	Note	
DCLK	Frequency	$f_{CLK}$	-	69.25	-	MHz	LVDS 2 port
Hsync	Period	$t_{HP}$	1010	1040	1078	tCLK	
	Width	$t_{WH}$	16	16	16		
	Width-Active	$t_{WHA}$	960	960	960		
Vsync	Period	$t_{VP}$	1096	1111	1122	tHP	
	Width	$t_{WV}$	5	5	5		
	Width-Active	$t_{WVA}$	1080	1080	1080		
Data Enable	Horizontal back porch	$t_{HBP}$	24	40	50	tCLK	
	Horizontal front porch	$t_{HFP}$	10	24	52		
	Vertical back porch	$t_{VBP}$	10	23	28	tHP	
	Vertical front porch	$t_{VFP}$	1	3	9		

### 3-5. Signal Timing Waveforms

Condition : VCC = 3.3V

### 3-6. Color Input Data Reference

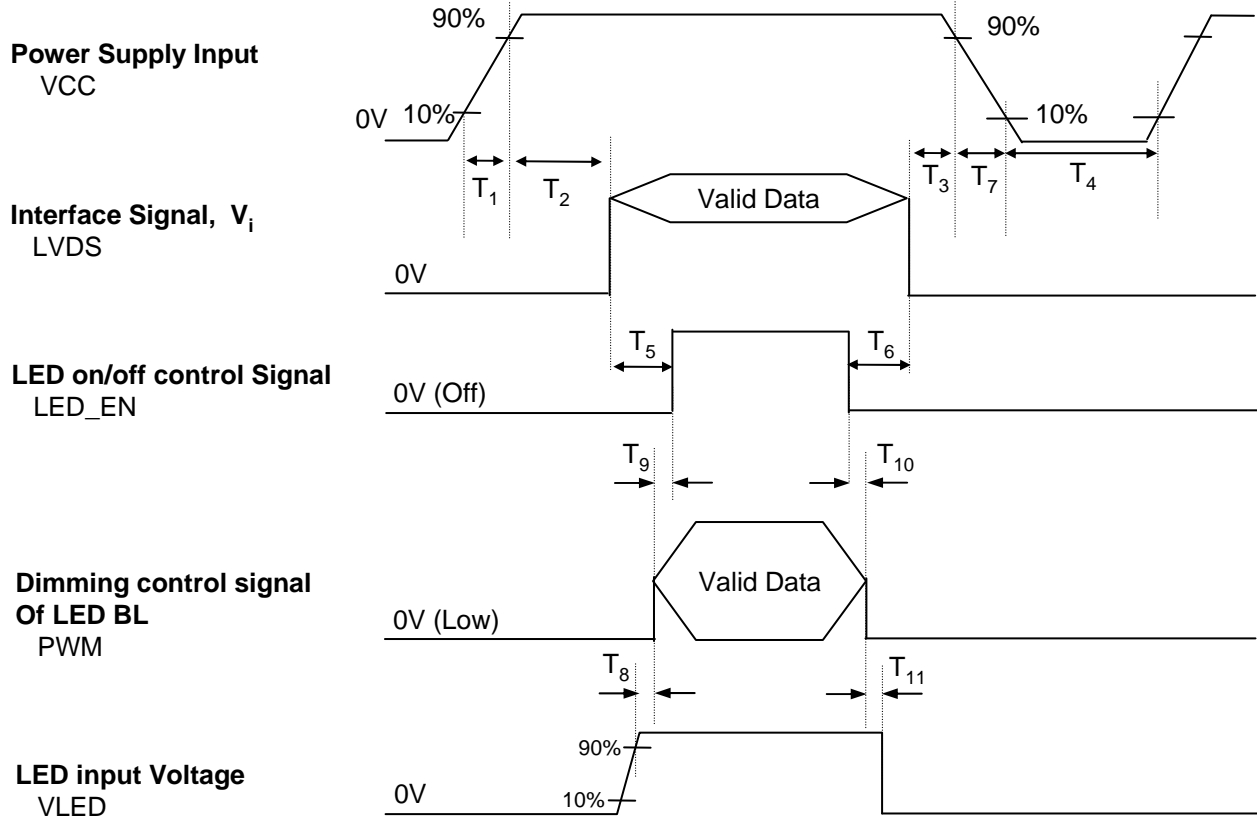

The brightness of each primary color (red, green and blue) is based on the 6-bit gray scale data input for the color ; the higher the binary input, the brighter the color. The table below provides a reference for color versus data input.

**Table 7. COLOR DATA REFERENCE**

Color		Input Color Data																	
		RED						GREEN						BLUE					
		MSB				LSB		MSB				LSB		MSB		LSB			
		R 5	R 4	R 3	R 2	R 1	R 0	G 5	G 4	G 3	G 2	G 1	G 0	B 5	B 4	B 3	B 2	B 1	B 0

T <sub>10</sub>	0	-	-	ms
T <sub>11</sub>	10	-	-	ms

Note)

1. Valid Data is Data to meet "3-3. LVDS Signal Timing Specifications"
2. Please avoid floating state of interface signal at invalid period.
3. When the interface signal is invalid, be sure to pull down the power supply for LCD VCC to 0V.
4. LED power must be turn on after power supply for LCD and interface signal are valid.

#### 4. Optical Specification

Optical characteristics are determined after the unit has been 'ON' and stable for approximately 30 minutes in a dark environment at 25°C. The values specified are at an approximate distance 50cm from the LCD surface at a viewing angle of  $\Phi$  and  $\Theta$  equal to 0°.

FIG. 1 presents additional information concerning the measurement equipment and method.

**FIG. 1 Optical Characteristic Measurement Equipment and Method**

**Table 9. OPTICAL CHARACTERISTICS**

$T_a=25^\circ\text{C}$ ,  $V_{CC}=3.3\text{V}$ ,  $f_v=60\text{Hz}$ ,  $f_{CLK}=69.25\text{MHz}$ ,  $I_{LED}=20\text{mA}$

Parameter	Symbol	Values			Units	Notes
		Min	Typ	Max

y axis, down ( $\Phi=270^\circ$ )	$\Theta_d$	50	-	-	degree	
Gray Scale						6

Product Specification

Note)

1. Contrast Ratio(CR) is defined mathematically as

$$\text{Contrast Ratio} = \frac{\text{Surface Luminance with all white pixels}}{\text{Surface Luminance with all black pixels}}$$

2. Surface luminance is the average of 5 point across the LCD surface 50cm from the surface with all pixels displaying white. For more information see FIG 1.

$$L_{WH} = \text{Average}(L_1, L_2, \dots L_5)$$

3. The variation in surface luminance , The panel total variation ( $\delta_{WHITE}$ ) is determined by measuring  $L_N$  at each test position 1 through 13 and then defined as followed numerical formula.  
For more information see FIG 2.

$$\delta_{WHITE} = \frac{\text{Maximum}(L_1, L_2, \dots L_{13})}{\text{Minimum}(L_1, L_2, \dots L_{13})}$$

4. Response time is the time required for the display to transition from white to black (rise time,  $Tr_R$ ) and from black to white(Decay Time,  $Tr_D$ ). For additional information see FIG 3.

5. Viewing angle is the angle at which the contrast ratio is greater than 10. The angles are determined for the horizontal or x axis and the vertical or y axis with respect to the z axis which is normal to the LCD surface. For more information see FIG 4.

6. Gray scale specification

\*  $f_V = 60\text{Hz}$

Gray Level	Luminance [%] (Typ)
L0	0
L7	1.00
L15	4.25
L23	10.90
L31	21.01
L39	34.82
L47	52.49
L55	86.56
L63	100

 This is subject to change without prior notice.

### 8-2. Packing Form

a) Package quantity in one box : 20 pcs

b) Box Size : 482 x 390 x 275

## 9. PRECAUTIONS

Please pay attention to the followings when you use this TFT LCD module.

### 9-1. MOUNTING PRECAUTIONS

- (1) You must mount a module using holes arranged in four corners or four sides.
- (2) You should consider the mounting structure so that uneven force (ex. Twisted stress) is not applied to the module. And the case on which a module is mounted should have sufficient strength so that external force is not transmitted directly to the module.
- (3) Please attach the surface transparent protective plate to the surface in order to protect the polarizer. Transparent protective plate should have sufficient strength in order to resist external force.
- (4) You should adopt radiation structure to satisfy the temperature specification.
- (5) Acetic acid type and chlorine type materials for the cover case are not desirable because the former generates corrosive gas of attacking the polarizer at high temperature and the latter causes circuit break by electro-chemical reaction.
- (6) Do not touch, push or rub the exposed polarizers with glass, tweezers or anything harder than HB pencil lead. And please do not rub with dust clothes with chemical treatment. Do not touch the surface of polarizer for bare hand or greasy cloth. (Some cosmetics are detrimental to the polarizer.)
- (7) When the surface becomes dusty, please wipe gently with absorbent cotton or other soft materials like chamois soaks with petroleum benzene. Normal-hexane is recommended for cleaning the adhesives used to attach front / rear polarizers. Do not use acetone, toluene and alcohol because they cause chemical damage to the polarizer.
- (8) Wipe off saliva or water drops as soon as possible. Their long time contact with polarizer causes deformations and color fading.
- (9) Do not open the case because inside circuits do not have sufficient strength.

### 9-2. OPERATING PRECAUTIONS

- (1) The spike noise causes the mis-operation of circuits. It should be lower than following voltage :  
 $V = \pm 200\text{mV}$  (Over and under shoot voltage)
- (2) Response time depends on the temperature. (In lower temperature, it becomes longer.)
- (3) Brightness depends on the temperature. (In lower temperature, it becomes lower.)  
And in lower temperature, response time (required time that brightness is stable after turned on) becomes longer.
- (4) Be careful for condensation at sudden temperature change. Condensation makes damage to polarizer or electrical contacted parts. And after fading condensation, smear or spot will occur.
- (5) When fixed patterns are displayed for a long time, remnant image is likely to occur.
- (6) Module has high frequency circuits. Sufficient suppression to the electromagnetic interference shall be done by system manufacturers. Grounding and shielding methods may be important to minimize the interference.

### 9-3. ELECTROSTATIC DISCHARGE CONTROL

Since a module is composed of electronic circuits, it is not strong to electrostatic discharge. Make certain that treatment persons are connected to ground through wrist band etc. And don't touch interface pin directly.

### 9-4. PRECAUTIONS FOR STRONG LIGHT EXPOSURE

Strong light exposure causes degradation of polarizer and color filter.

### 9-5. STORAGE

When storing modules as spares for a long time, the following precautions are necessary.

- (1) Store them in a dark place. Do not expose the module to sunlight or fluorescent light. Keep the temperature between 5°C and 35°C at normal humidity.
- (2) The polarizer surface should not come in contact with any other object.  
It is recommended that they be stored in the container in which they were shipped.

### 9-6. HANDLING PRECAUTIONS FOR PROTECTION FILM

- (1) When the protection film is peeled off, static electricity is generated between the film and polarizer.  
This should be peeled off slowly and carefully by people who are electrically grounded and with well ion-blown equipment or in such a condition, etc.
- (2) The protection film is attached to the polarizer with a small amount of glue. If some stress is applied to rub the protection film against the polarizer during the time you peel off the film, the glue is apt to remain on the polarizer.  
Please carefully peel off the protection film without rubbing it against the polarizer.
- (3) When the module with protection film attached is stored for a long time, sometimes there remains a very small amount of glue still on the polarizer after the protection film is peeled off.
- (4) You can remove the glue easily. When the glue remains on the polarizer surface or its vestige is recognized, please wipe them off with absorbent cotton waste or other soft material like chamois soaked with normal-hexane.
