SUBJ: Grand Prix / NASCAR® Trough Up-Kicker Failure

Symptoms:

Game will not start.

• 50VDC coils are inoperable.

 I/O Power Driver PCB F21 3A 250V SLO-BLO Fuse is blown.

 Trough Up-Kicker (Coil #1) is overheating (paper wrap is browned).

 Q1 Transistor STP20N10L (on I/O PCB) is shorted.

Explanation:

The Game Software Version 4.20 or lower (U210 on the CPU/Sound Board II) has a problem in which it may repetitively fire the Trough Up-Kicker Coil when serving the ball up to the Shooter Lane.

Solution:

Ensure your Game Code on your CPU/Sound Board in location U210 is v4.50+ and replace all faulty components.

If you do not have an ePROM

Burner, you'll need to order the latest version on an EPROM from your local distributor. Ask for SPI Part Number 960-5009-00 and specify if you need Grand Prix *or* NASCAR Game Code.

4-Ball

Trough

Coil (26-1200)

For the location & how to change out your EPROM (**U210**), refer to Service Bulletin **150**. Also, review Service Bulletin **161**, **Part 1: Enter/Exit Scoop Modification**, to ensure you have the proper length screws for the Enter/Exit Scoop.

Fuse, 3A 250V Slo-Blo

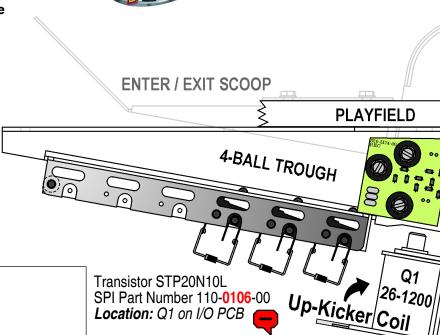

SPI Part Number 200-5000-08

SPI Part Number 090-5044-00T

Location: Coil 1 under playfield, lower right.

Location: F21 on I/O PCB
