Installation Piano Mod TZ Ver. 1.0

1) Power the TZ off. Unscrew the clockplate and slide the clock with plate to the side

2) Remove old light bulbs and keep in mind where which color was. Slowly turn the old lampholder 180 degrees around, like in the picture. You may need a screwdriver to loosen this somewhat. Be very careful you don't short circuit any wires while turning the holders around. CHECK THIS VERY GOOD BEFORE GOING FURTHER!

3) Lay the clock completely on its side with the piano next to it

Place the new Connection bulbs with the right color in the same place.

4) Slide the clock and base plate back to his place and watch the hole is centered.

5) Now center the hole in the piano also so that you see through. Sometimes it's help to center with a small screwdriver. Now gently tighten the piano with the supplied screw. Be careful not to overtighten!
The screw is in place when the top is under the surface and the piano keyboard will fit over this.

6) Unmount the protective layer from the pianokeyboard and press it in place.

You're now ready and can turn the game on.
